İstanbul, Türkiye

PROFILE

Computer Engineering graduate with a strong foundation in data related fields and distributed systems. Experienced in building scalable batch and real-time data pipelines using Apache Spark, Kafka, SQL, BigQuery and Cloud technologies. Proven track record in developing recommendation systems and AI-assisted backend tools. Passionate about solving complex data challenges and optimizing large-scale data architectures.

EDUCATION

Hacettepe University | Ankara, Türkiye ***September 2021– July 2025***

B.Sc. in Computer Engineering

Key Modules: Algorithms, Data Structures, Data Management & Systems, Machine Learning, NLP

EXPERIENCE

Goaltech | Ankara, Türkiye **June 2024 – July 2024**

Intern – Data Engineering & Science Field

- Built and maintained batch and near real-time data pipelines using Alpaca APIs
- Worked with market data ingestion and storage design

IBTECH | Ankara, Türkiye **March 2025 – September 2025**

Intern – Application Engineering (Backend)

- Engineered an AI-assisted UI generation system for WPF applications using LLMs and internal frameworks, reducing screen development time by approximately 33%.
- Designed complex prompt engineering rulesets to automate UI creation, ensuring standard compliance across 20+ distinct screen modules.
- Facilitated the integration of AI modules into the existing backend architecture via RESTful APIs.

PROJECTS

- **User Behavior Analysis & Real-time Recommendation Systems in e-commerce (Graduation Project):**
  - Designed and implemented a real-time recommendation system to improve personalized product suggestions by analyzing user behavior and clickstream data
  - Technologies: Apache Spark, Apache Kafka, MongoDB, Pinecone. (See on Github)
- **Big Data Analytics Portfolio & Spark Optimization**
  - Technologies: Apache Spark (PySpark), SQL

  - **Successful Sellers Analysis:** Developed batch processing jobs to identify high-performing sellers based on multi-variable criteria. (See on Github)
  - **Critical Threshold Monitoring:** Implemented logic to detect inventory levels and product metrics falling below critical thresholds. (See on Github)
  - **Sales Distribution Reporting**: Created analytical reports grouping orders by price intervals to visualize sales distribution effectively. (See on Github)
  - **Data Merging:** Optimized snapshot data merging processes using Spark for large datasets. (See on Github)

SKILLS

Data & Streaming:
Apache Spark (PySpark), SparkSQL, Apache Kafka, Batch & Streaming Pipelines, HDFS
Data Modeling & Analytics:
Dimensional Modeling, Star Schema, Fact & Dimension Tables, Analytical Datamarts
Databases & Storage:
PostgreSQL, MongoDB, BigQuery, Pinecone (Vector DB), Data Warehouse, Data Lake
Orchestration & Cloud:
Apache Airflow, AWS (S3, EC2, IAM)
Programming & Query Languages:
Python, SQL, Java, C#
Data Quality & Optimization:
Data Validation, Incremental Loads, Partitioning, Performance Tuning
Tools & BI:
Docker, Power BI, Git
